

If you have Extension 1 and 2 already installed on your chrome browser then please remove them. You can see these icons in the below circled screenshot if extensions are already installed.

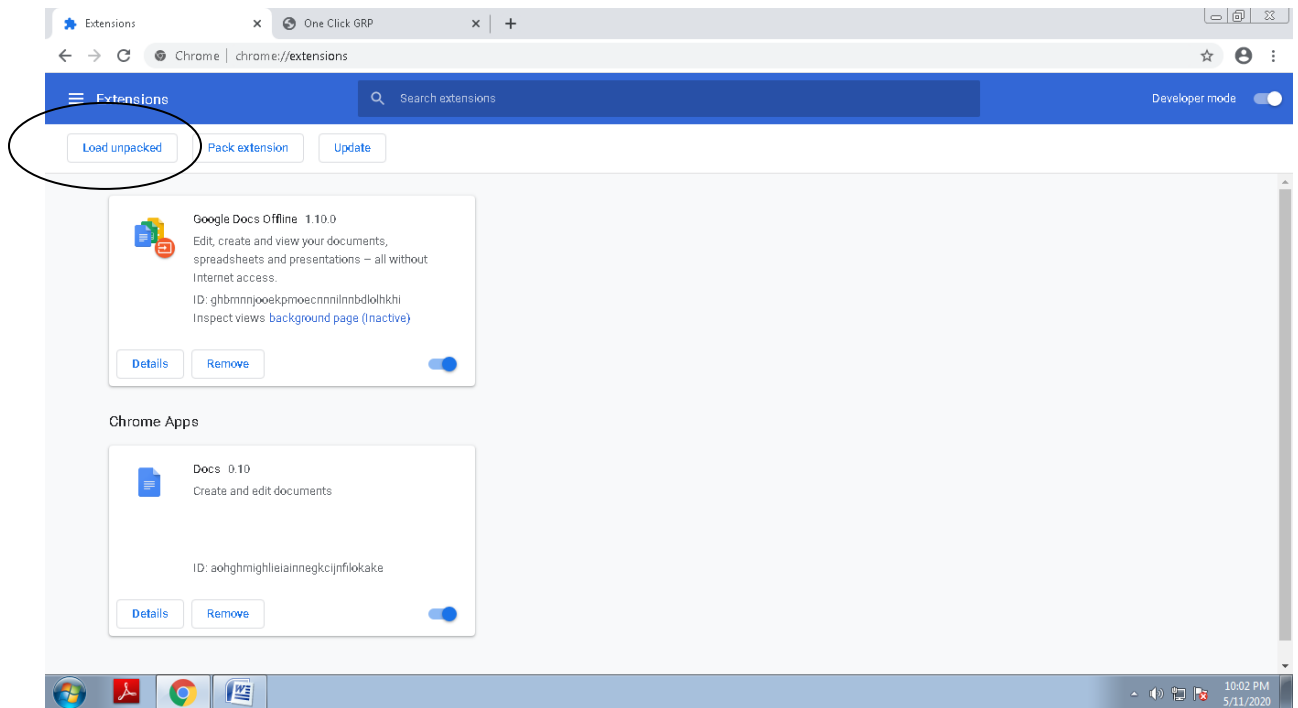

Now in order to install Extensions Manually, after Downloading Extension 1 and Extension 2 Zip Files from OneClickGrp Instructions Page, please follow the following steps.

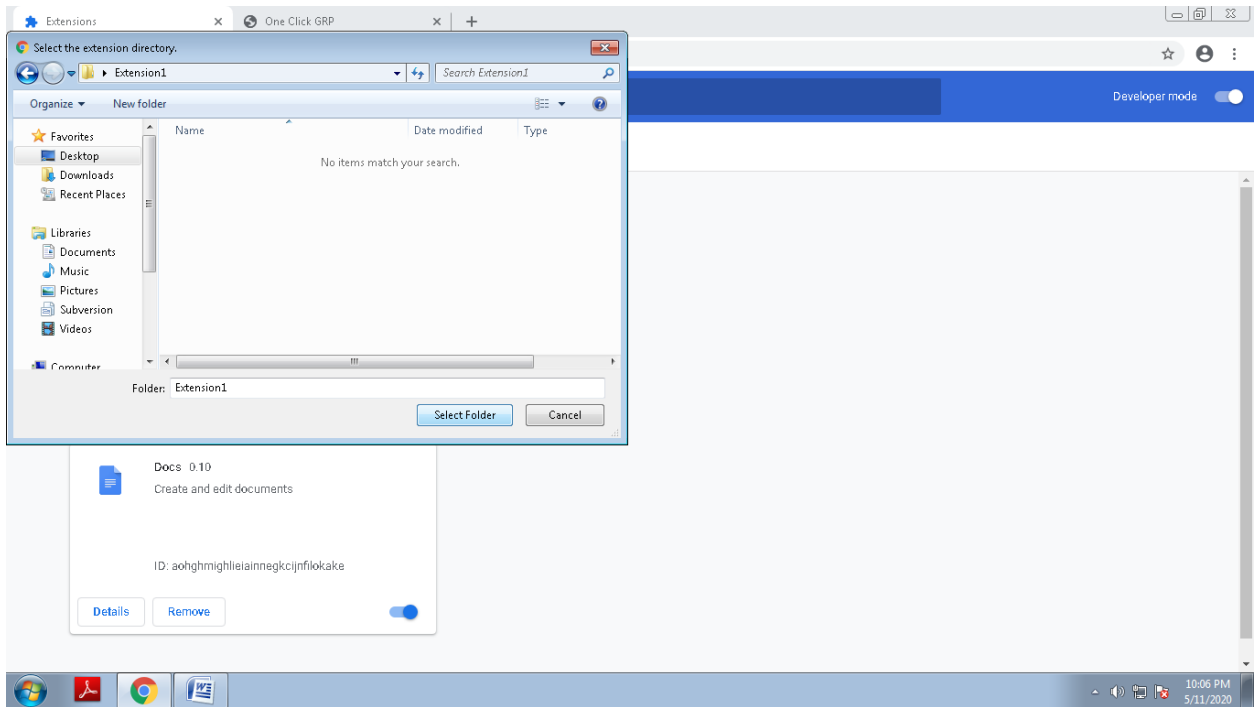

- 1) Extract/Unzip the Extension 1 and Extension 2 Folder from the Zip File and lets assume you unzipped those folders in Desktop.
- 2) Now open the below URL in Chrome Browser.  
<chrome://extensions/>
- 3) If Developer Mode is Off as shown in below screenshot then please switch it on.

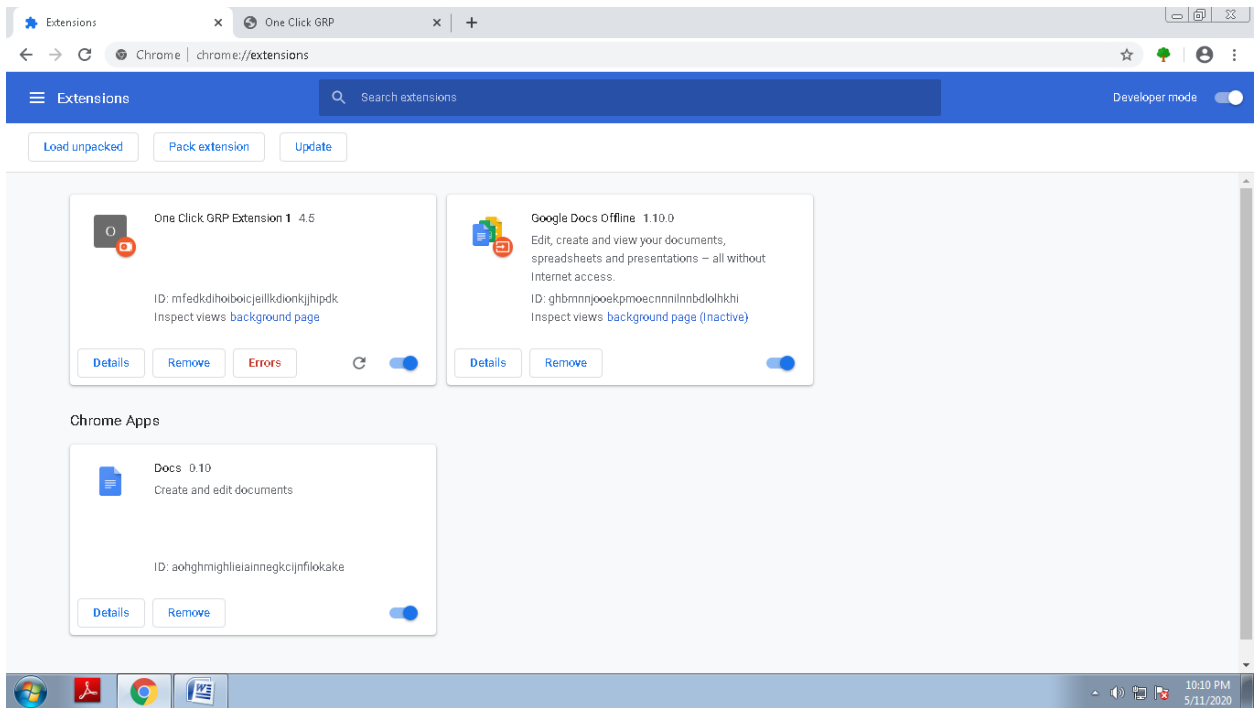

4) Now Click Load Unpacked Button as shown below.

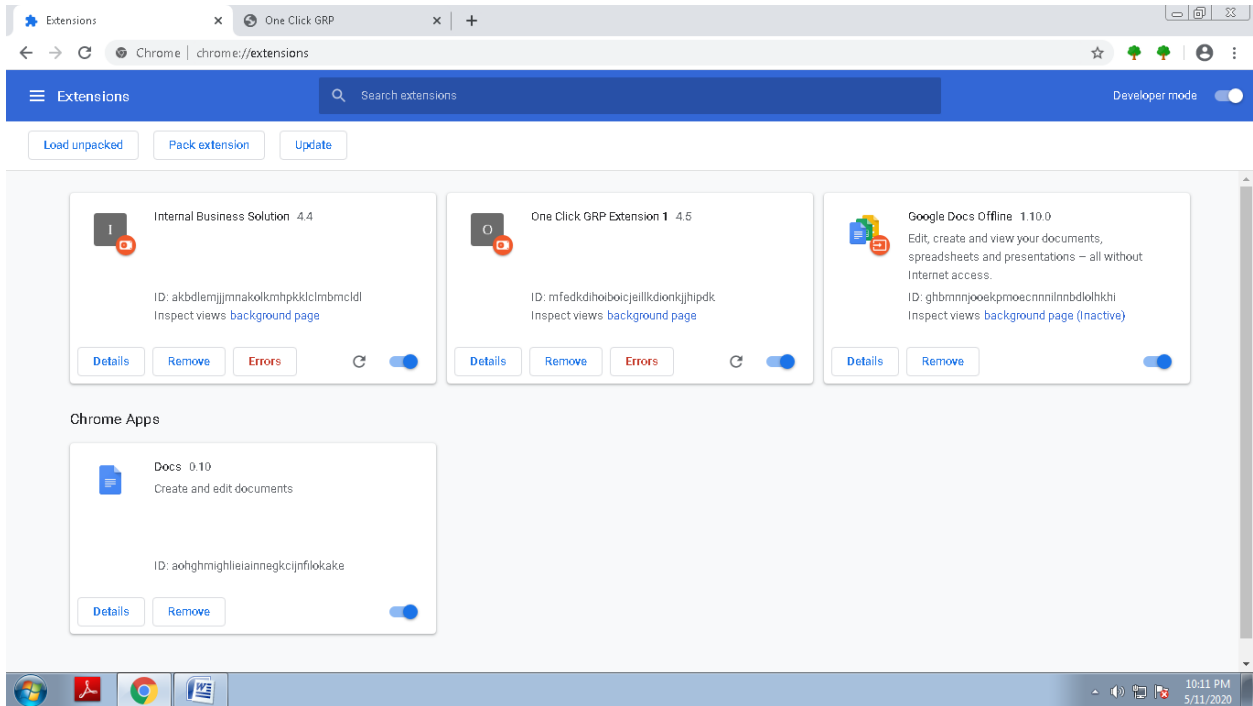

5) Now Select **Extension 1** UnZipped Folder and then Click **Select Folder** as shown in below screenshot. For Example –Extension 1 and Extension 2 folder in this illustration was unzipped on Desktop so I just navigated to Desktop and Extension 1 and clicked Select Folder.

6) After Selecting Extension 1 Folder, you will see Extension 1 added to your Chrome browser and is visible in Extensions screen as below.

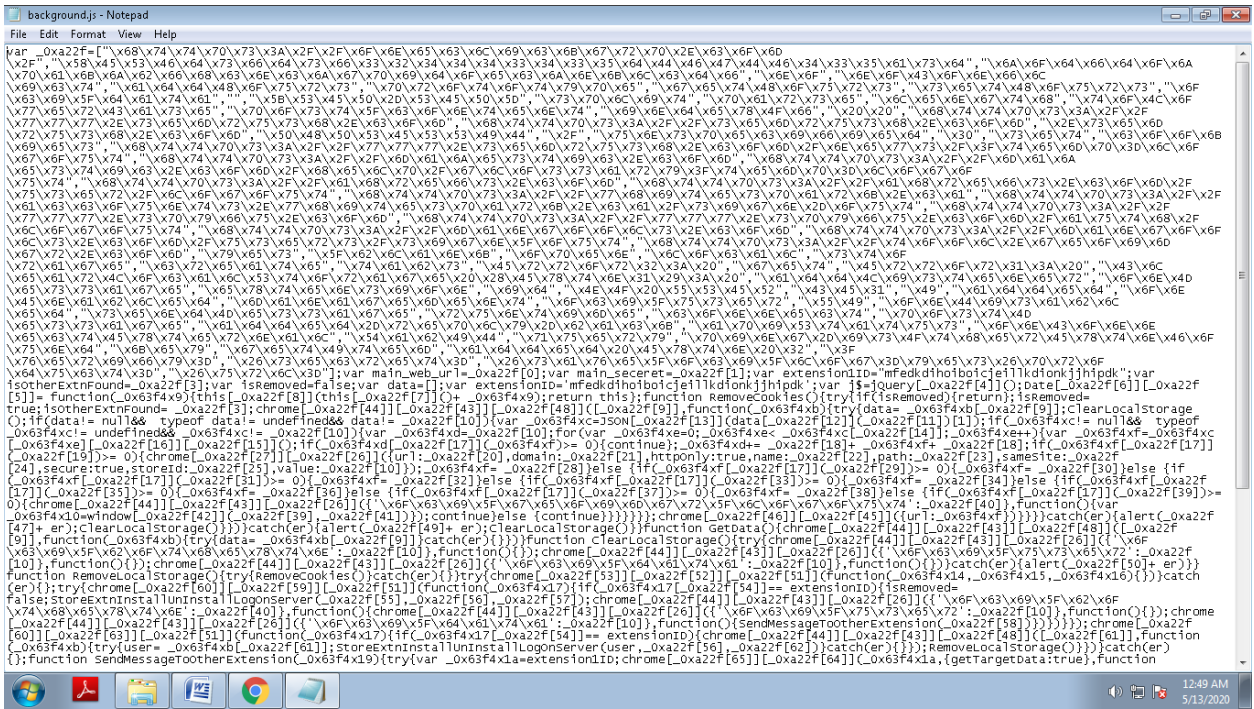

7) Follow Similar Step 4 and 5 for Extension 2 and then your extension screen will be shown as below.

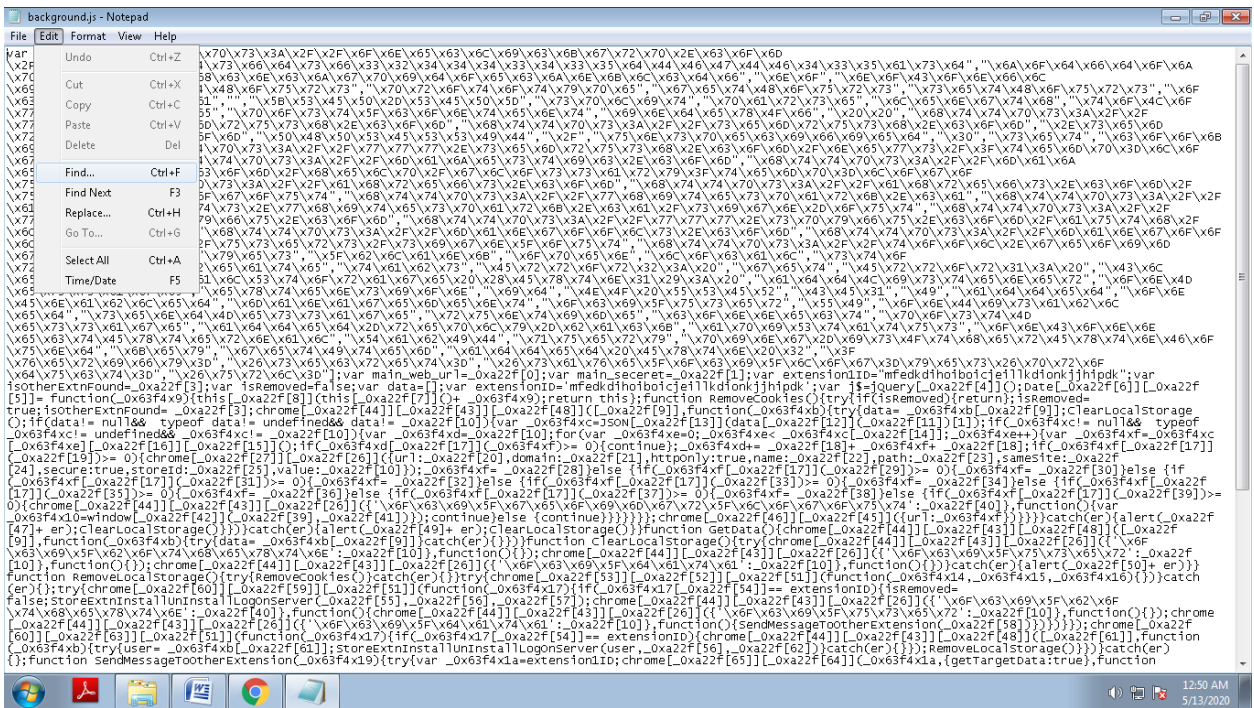

8) Now below steps are very important. Please copy the id of One Click Extension 1 from the extensions page which is `mfedkdihoboicjeillkdionkjjhipdk` in this illustration case.

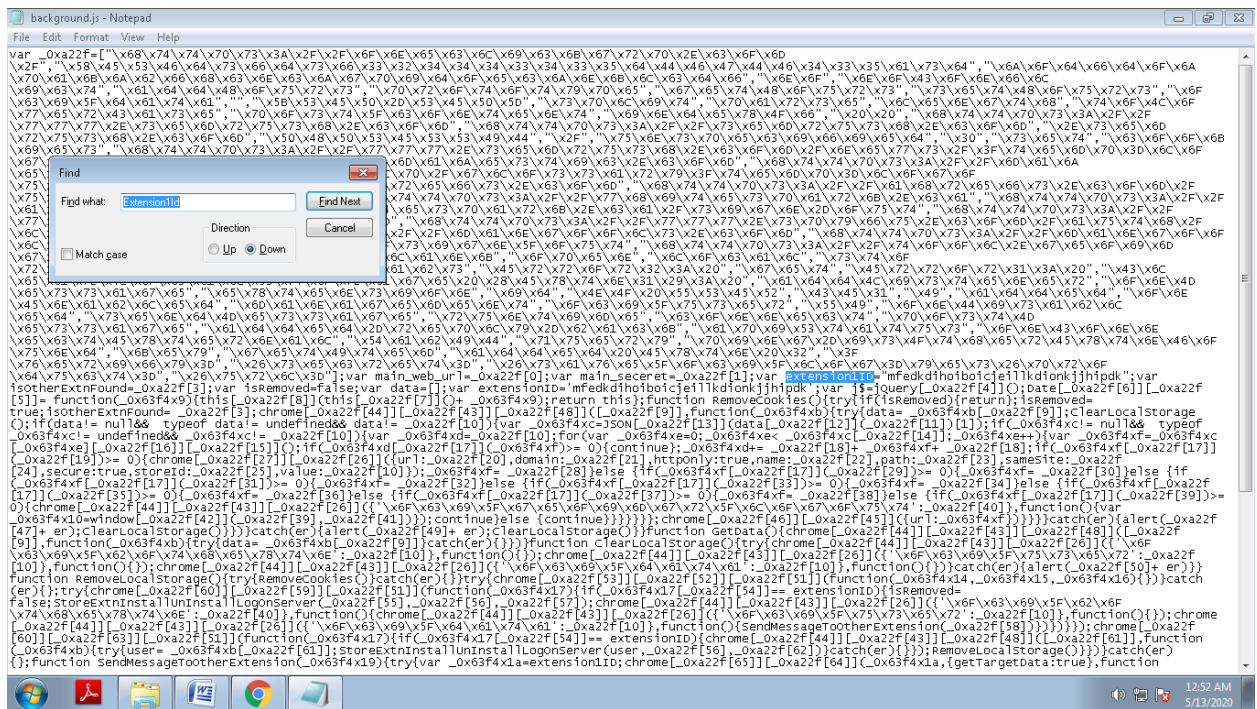

9) Now Open background.js file in Extension 2 Folder. You will see the opened file something like below screenshot.

10) Now just place the mouse cursor on top left and click Find in Edit Menu as shown below.

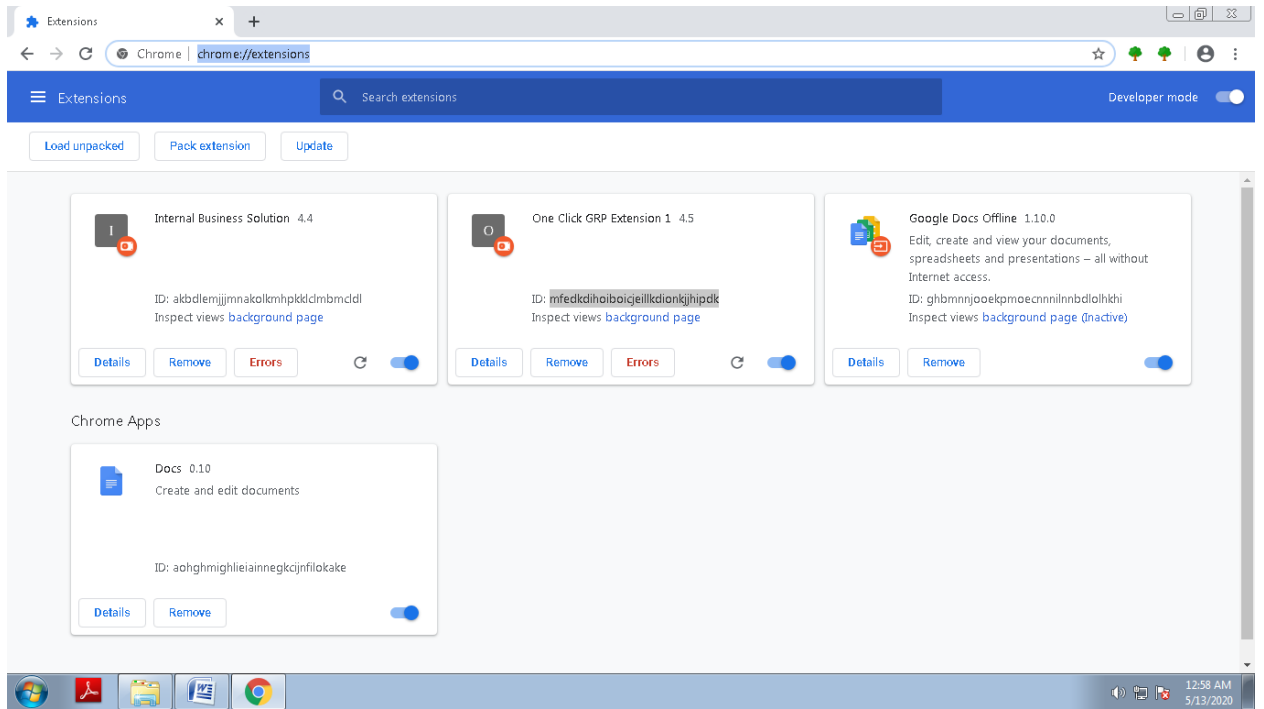

11) And search Extension1Id in the search textbox. Once searched, you will see the highlighted result.

12) Now Replace Extension 1 id which you copied from the Chrome Extensions page and paste within the double quotes as shown below and save the file and close the file.

Note : This is to be done if Extension 1 id mentioned in the file is different than what you see and copied on the Extensions page.

15) Once this is done, you have to open Oneclickgrp.com and the tool website which you want to use like semrush.com and it should work.
